Re: Ameresco San Joaquin LLC Emissions Testing Postponed

Dear Director,

Ameresco San Joaquin LLC owns and operates two landfill gas fueled engine generators at our facility located at 6484 N Waverly Rd, Linden, CA 95236. The engines are subject to the New Source Performance Standard, Subpart JJJJ, and have not been certified by the manufacturer to meet the emission standards. Emissions from these units must be tested every 8,760 hours or 3 years, whichever comes first.

The last emissions test was conducted the week of April 2, 2019. Based on the elapsed hours of operation since then, the next test is due by April 26, 2020. Testing is currently scheduled for the week of April 6, 2020. Notification of this test date was sent to the Environmental Protection Agency on February 21, 2020.

Due to the "Stay at Home" order affecting the state of California during the COVID-19 pandemic, our source test vendor has implemented a policy that prohibits overnight hotel stays. The San Joaquin facility is located too far from the vendor's home office to conduct the testing by commuting to the site each day. Therefore, we are requesting an extension to the source test deadline to expire 90 days after the Governor lifts the Stay at Home order. A follow up notification will be submitted when the test is rescheduled.

Respectfully,

A handwritten signature in blue ink, appearing to read "Andrew McClelland".
